WARBY PARKER

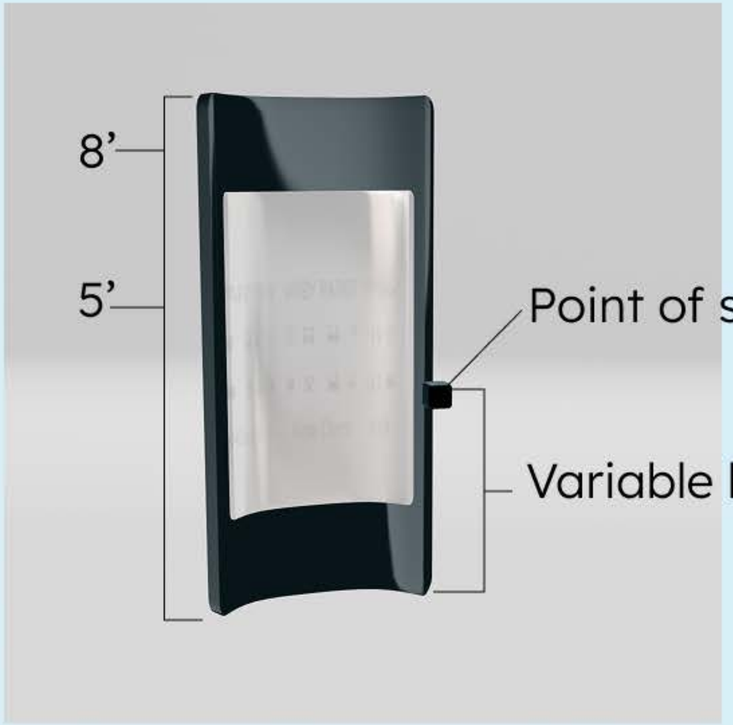

Kiosk Design

Jessica Reminder

WARBY PARKER

Hardware

- Warped screen for multiple angles during glasses try on.
- Screen is a giant interactive mirror.
- Casing is 8 feet but touchscreen is only 5 feet.
- Kiosk will be nested between shelves of glasses against the wall.
- Although it is a larger Kiosk, the user will be able to slide the content as well as the point of sale higher or lower based on their comfort.
- After completing a transaction, an employee packages their purchase at the counter.

WARBY PARKER

Features

- In-store digital try-on
  - best for when a certain color or style is out of stock in store.
  - the customer can try on a physical pair in store and then try different colors on via the kiosk.
- The customer can take an eye assessment to see what type of glasses would be most effective for them.
- The customer can redeem points and renew their subscriptions.
- The customer can order online or simply pay for a pair of glasses via the kiosk.

WARBY PARKER

Content Considerations

- There are a ton of products. Seriously.
- Four main categories
- Five sub categories
- Products
- Shop Online
- Get a Prescription
- Visit a Store
- Ways to Save
- Education
- About us
- Products being sold
- Ways to filter those products
  - color, shape, etc
- Interactions you can utilize on the website
  - the kiosk will not have the, “visit a store” function.

WARBY PARKER

Content Considerations

- Warby Parker often has brand deals with different creatives and comes out with new style lines. This can be challenging to format but Warby Parker always sorts these products into their own category under, “Others,” which is one of the four main categories of products.
- Seasonal products fall into this, “Others,” category as well.
- Products are never listed on pages alone unless the customer uses filters to find a specific products.
- Products are never listed on pages alone unless the customer uses filters to find a specific products.
- 250 will be the max amount of character per description, but most wont even get close.
- When products are out of stock, they will indicate that they are not available in-store but can be purchased online and then delivered.

WARBY PARKER

Functionality

- The user is greeted by a screen the cycles through photos, people smiling with their glasses on, the glasses staged by some flowers, nice stuff like that.
- There is more than one way to get to a product, you can sort through the filters, color, size, price, etc..
- The loyalty program is called, “Buy a pair, Give a Pair,” and can be accessed by through one of the main six interactions.
- Instead of customizing their products, users will be able to take a style quiz.
- There is no ‘ordering,’ system, everything you use the kiosk for is already in store of online, this combined with good design should prevent people from needing to (God forbid) interact with a human at all.

WARBY PARKER

Functionality

- There is always a very subtle start over button, but it is never the focal point.
- When adding to cart, the user can always go back to the main screen, but they have to press the. “add to bag,” button to save their selection.
- “Remove,” is an option once you get to the bag.

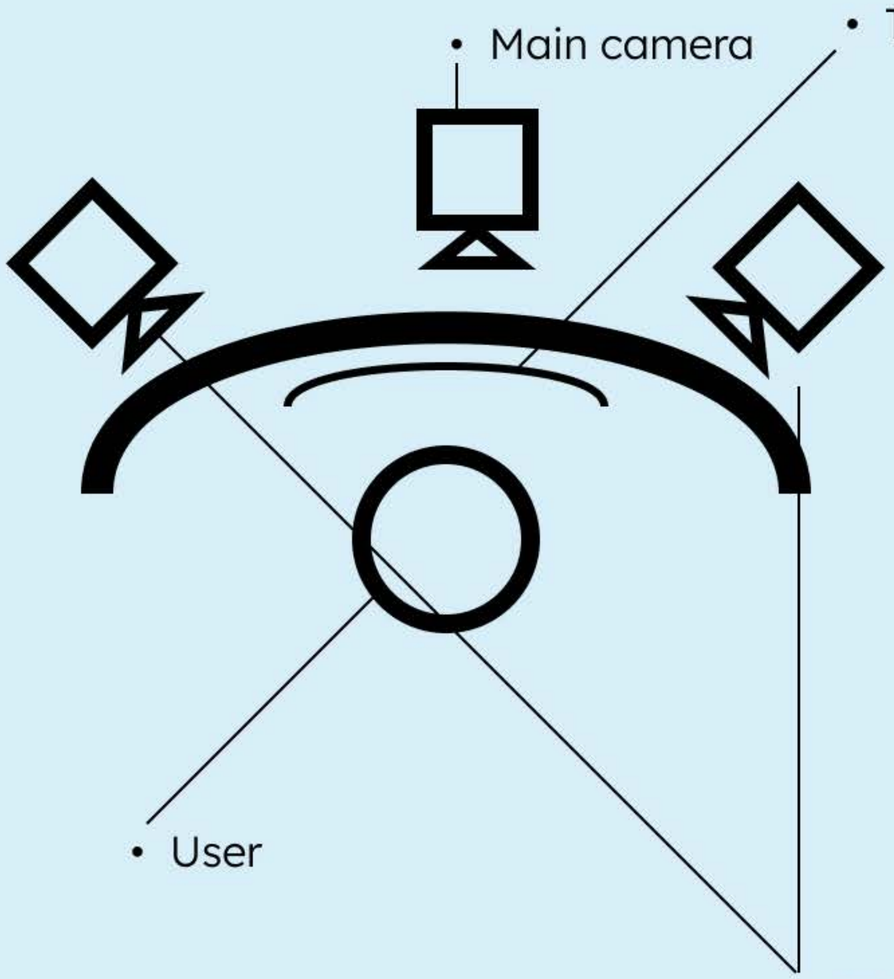

- The default idle time for the kiosk will be 30 seconds before it asks the user if they are still shopping, but in virtual glasses try on, the time will double so that people can have an opportunity to see if they like the glasses.
