Styleguides

Establishing a cohesive style.

The Warby Parky kiosk is an in-store digital styling assistant using a smart mirror. Because of this, color palette is limited and design elements are kept to a minimum so users are not overwhelmed with different dimensions of color. This is necessary for individuals with vision impairment.
Keep this in mind as you go through this styleguide.

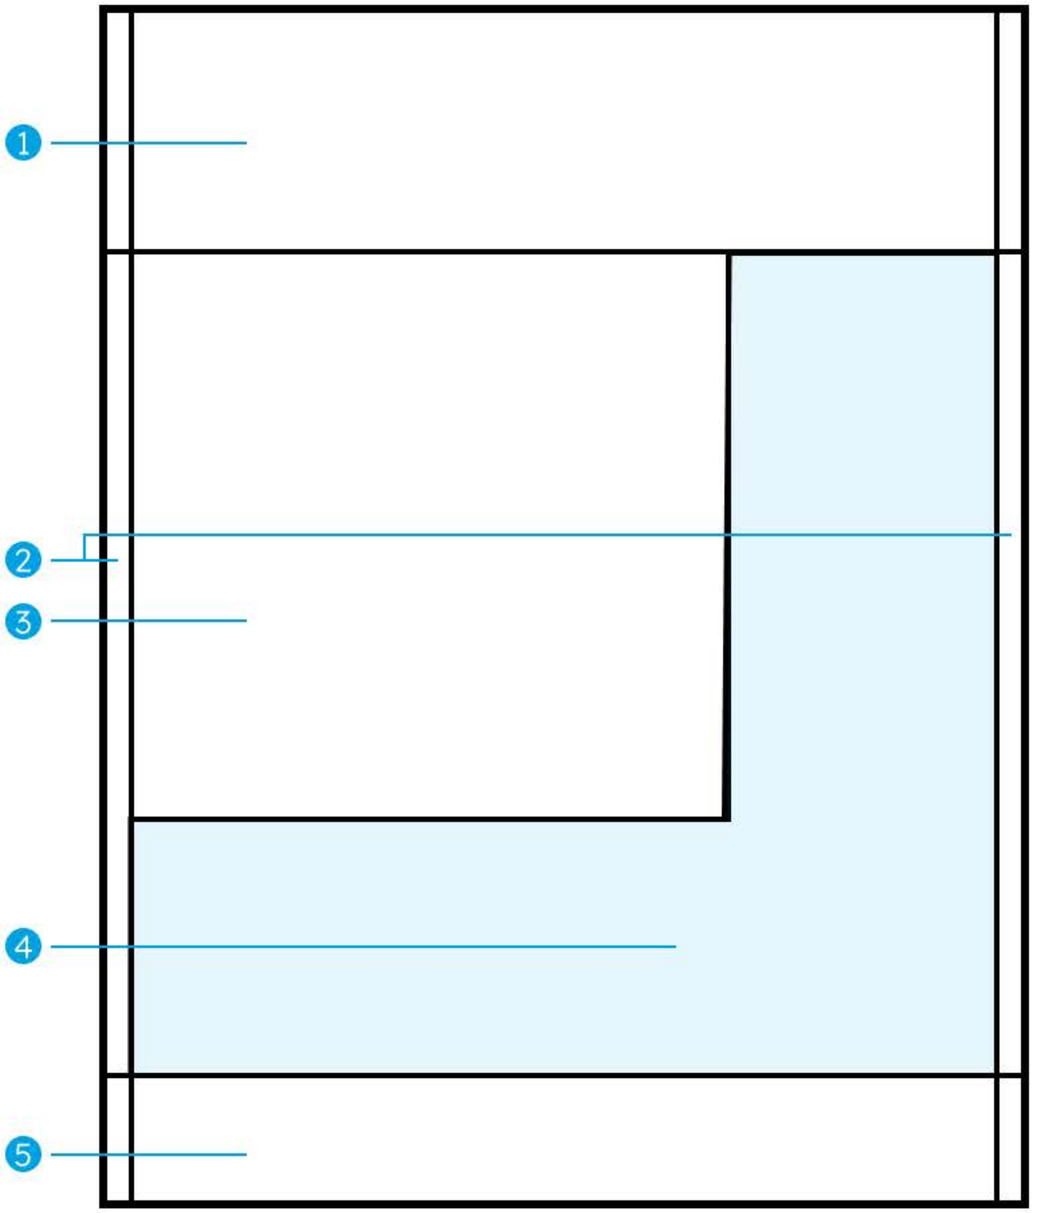

Spring 2025 Interactive III

Table of Contents

1. High Level Structure
2. General Structure
3. Grid
4. Corners
5. Image Treatment
6. Typeface
7. Button Treatment
8. Logo Treatment
9. Search Bar
10. Prescription
11. Color and Fill Treatment

High Level Structure

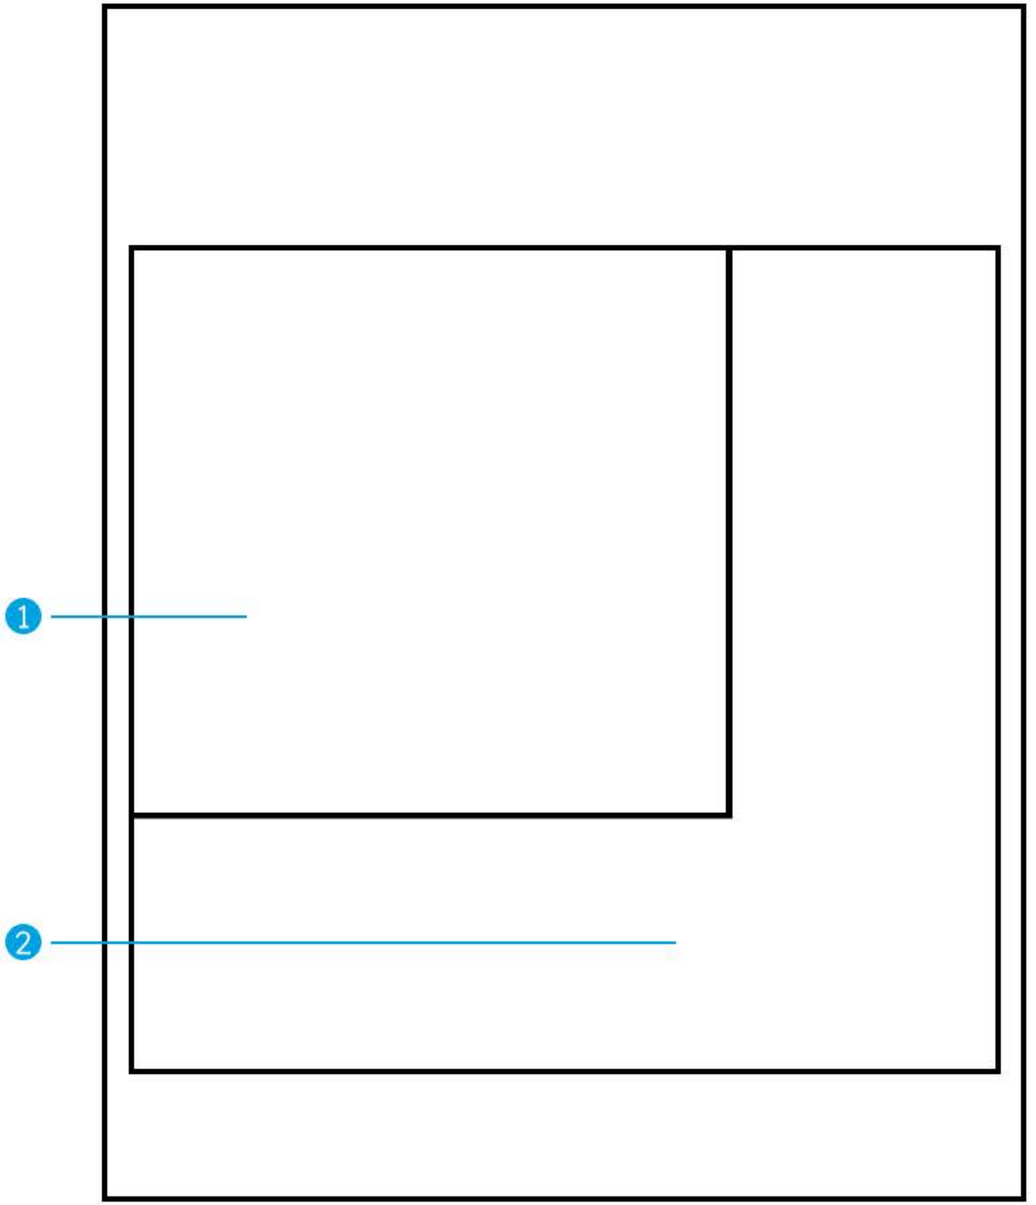

1. The top margin measures at 2441 x 646px.
2. The side margins measure at 76px width.
3. The ‘no touch zone’ is measured at 1581 x 1505px.
4. The remaining blue area is where interaction will be.
5. The bottom margin is measured at 346px.

General Structure

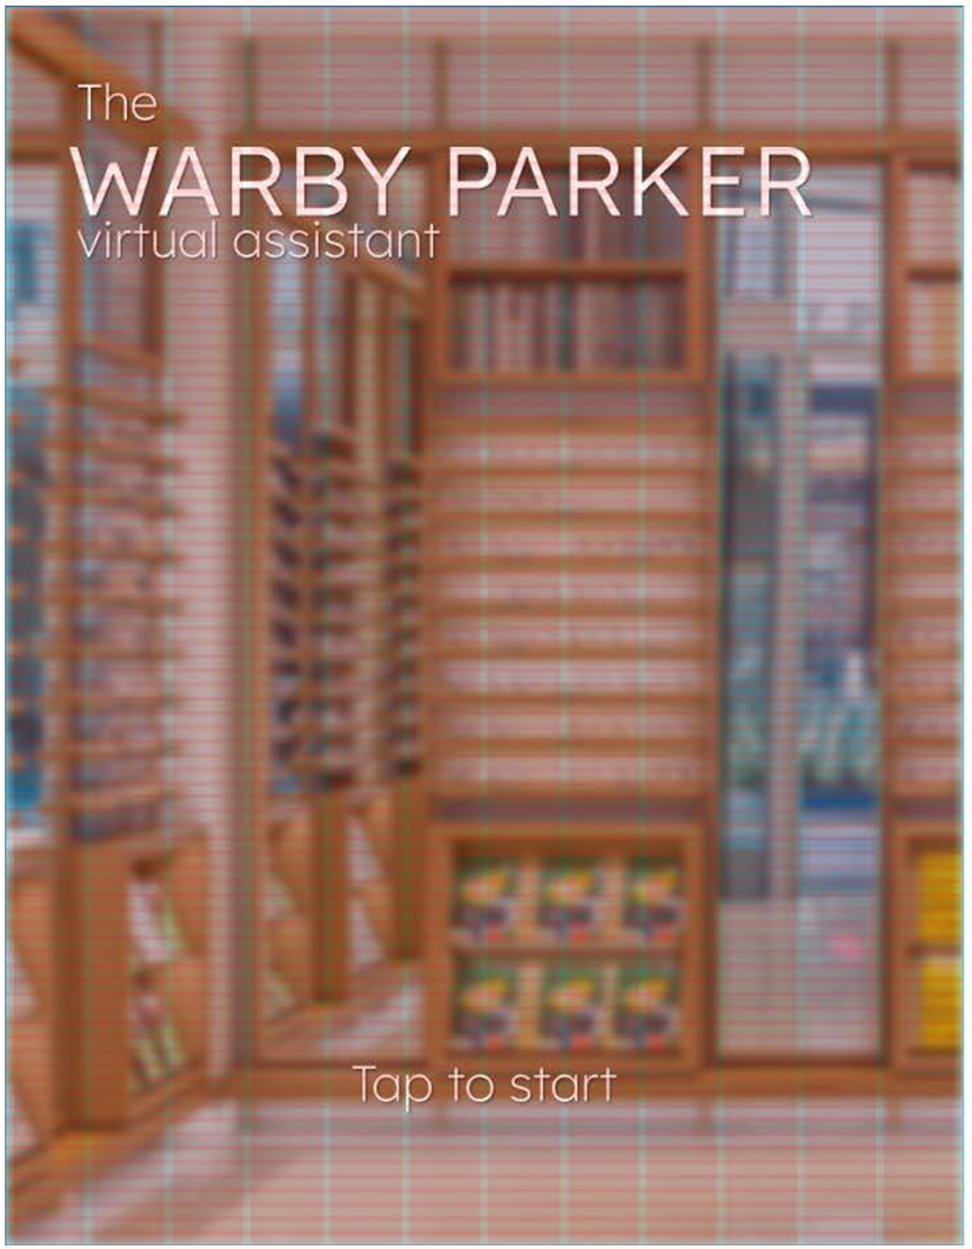

1. This is my touch guide showing accessibility and ease of reach.

2. The red area represents my “no touch zone,” crucial for the function of a smart mirror to stay clean and usable.

Grid

1. The columns are 12 count with a 20 Margin and 20 gutter.
2. The rows are automatic and fixed to the top with a height of 12 and a gutter of 24.
3. The grid is only used as a guide to align text and content.

Corners

Here are some examples of corner application.
Corners will be rounded at two intervals-

1. 18px for buttons of clickable elements
2. Fully rounded for sliding elements

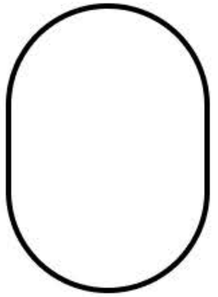

Image Treatment

Images are used towards the end of the experience, and they are treated in one of two ways-

1. A majority of the images will be the glasses photographed from a front view with the arms extended
2. When a physical aspect is being chosen, glasses may be photographed from a 3/4 angle.

Metal

Typeface

Lexend matches the original WARBY PARKER font the most accurately

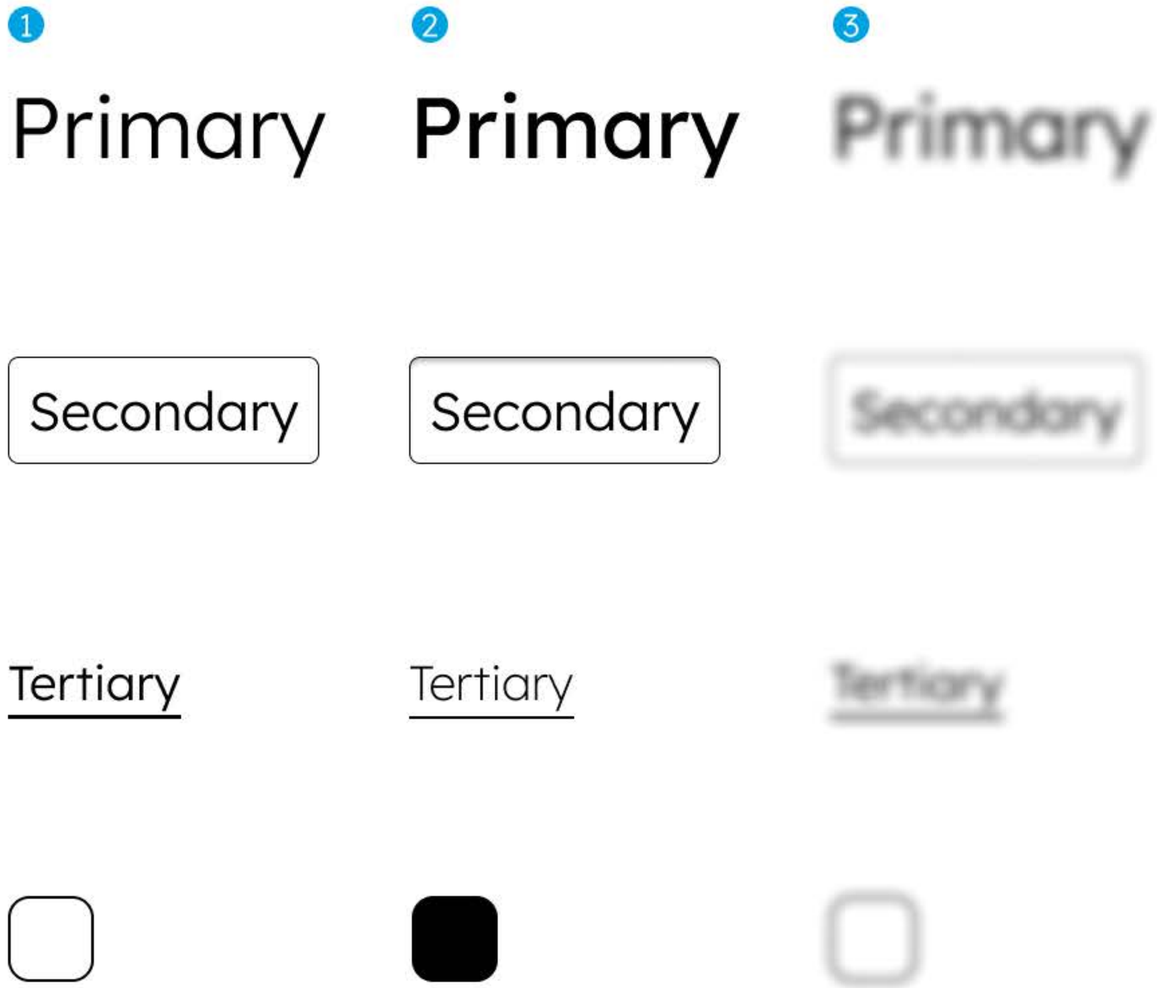

To preserve legibility reserve type to these three weights and three sizes.

Lexend Light
Lexend Regular
Lexend Medium

Default font: 96
Tertiary Button and prescription information: 64
Search bar: 48

Button Treatment

1. This is the default state showing the base for each type of button
2. This is the section that shows each different type of button while it is pressed, letting the user know that their option has been selected.
3. This is the disabled state, characters will be blurred out until they are activated by any required actions.

Logo Treatment

The Logo treatment on the kiosk has to be altered from the original bright blue. In this case, the black is symbolic of a transparent background meant to highlight the while text.

The white sets the text apart from the room that may appear in the mirror.

Search Bar

The user is only able to select one healthcare provider, when the user selects an option, they have to either un-select the option to choose a different one, or they continue through the experience.

Prescription

The area to input the users prescription is the most important part of the experience, and in this case, the user moves through the rows from left to right.

The user is only required to fill out the Sphere, Cylinder, Axis, and Prism sections in order to continue.

	Sphere	Cylinder	Axis	Prism	Base	Add
Right eye OD						
Left eye OS						
PD						

Colors and Fill Treatments

There is a popular phrase that says, “It’s not all black and white,” but in this case it is.

1. Because of all the mirrored aspects, design elements are in white.
2. Minor secondary elements such as radio button fill are black.
3. The background of the design has to be transparent to allow the mirror effect to work.

   You cannot see it on this page but the example is there.
